Steri-Dri Stops Infection and Cross Infection

Fast acting, fast drying Steri-Dri is rapidly absorbed into the skin, killing all harmful bacteria on contact. Steri-Dri is gentle and does not cause the skin to 'dry-out' after use. Steri-Dri leaves a residual biocidal shield, this ensures that as bacteria is attracted to the skin, Steri-Dri will continue to sterilise for up to 2 hours after application, killing bacteria and preventing cross contamination.

Steri-Dri is versatile and is safe to use for sterilising equipment, cutting equipment, preparation surfaces, including surfaces where the use of water based disinfectant/sterilisers are undesirable and gloves and boots.

Tests prove that Steri-Dri is effective against a wide spectrum of viruses, yeast moulds and bacteria . Steri-Dri is a food grade skin steriliser and is used throughout creameries, meat and food plants, baby formulation manufacturers, breweries and high risk food areas.
